DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a) Claims 1, 2, 4, 5, 7-10, 14 and 21-23: the meaning of “monodisperse” is not clear.

b) Claim 1, 7-10 and 14: the meaning of “dissolving” is not clear. Dissolving what?

c) Claim 2 and 8: “type” is vague and not defined.

d) Claim 2: there is no clear antecedent basis for “these”.

e) Claim 2, 4, 5: the meaning of “specific” is not clear.

f) Claim 7-10 and 14: there is no clear antecedent basis for “it”.

Art Unit: 1792

g) Claim 12 and 18-20: the meaning of “deep-ditch” is not clear.

h) Claim 12 and 18-20: the meaning of “aspect ratio” is not clear.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP2002-128600.

See Abstracts and partial machine translation.

‘600 teaches creating an ordered array of particles from a colloidal solution, with an electric double layer, followed by using acrylic resin or inorganic material as a packing material around the particles (See Abstracts; [0006]-[0010] [0060]). The ‘600 process appears to meet the limitations as claimed.
